

Programming Parameter Guide

How to install Programmer:

Runs On PC or Mac running Windows 7/10

NOTE: Requires **USB 2.1** Port. **The programmer will not work with USB 3 - if your PC only has USB3 ports suggest you attach X10DR device via a usb patch block most are 2.1)**

Included with the Programmer download file application are instructions on how to set-up the programmer on your Windows 7/10 PC. Please follow those instructions to install the programmer correctly onto your computer.

USER PROGRAMMER INSTALLATION GUIDE

The X10DR User Programmer requires two separate programs to be installed.

- Step 1** – Drivers : Install BlueSuite found on www.x10dr.com (BlueSuite...EXE).
When given the choice of components to install please select the options shown below.
(Do not install Core, BlueTest3 or DFU tools).

How to use Programmer:

Runs On PC running Windows 7/10

Requires **USB 2.1** Port.

To put Handset into programming mode:

Turn off handset, attach programming cable between device Hirose port and PC then press red handset on/off button while holding PTT. LED will light red.

To put Gateway into programming mode:

Turn off gateway. Then hold gateway ON/OFF button down while attaching the programming cable to device micro-USB port and PC USB port. The LED will light red. *Note: The gateway's RJ45 socket should **not** be connected to the host radio.*

Always READ device first before proceeding further.

We suggest you SAVE file onto your PC for re-loading if required.

A GREYED out feature means your device does support that capability.

Read Device

Press to load current programming parameters from device to screen.

Program Device

Press to load current screen programming parameters to a device.

Restart (important)

Press to **restart** programmed device before removing programming cable.

Lock - Unlock File

Press to lock your desired parameter configuration before undertaking batch fleet programming. This will prevent you errantly changing a parameter unknowingly during reprogramming.

Load File

Press to load a previously saved programming parameters to device from its saved PC location.

Note: The Programmer automatically identifies the device type

Save File

Press to save a programming parameters from screen to desired PC location saved location.

Defaults

Press to reset with default device parameters

Exit

Press to exit program.

Handset Parameters

Programming Feature: Basic functions - Handset

Radio PTT key beep

Sounds talk permit tone sequence whenever PTT is pressed and handset is in range of its gateway.

Default - OFF

Emergency key beep

Sounds single tone whenever Emergency button is pressed and handset is in range of its gateway.

Default - ON

Talkaround PTT key beep

Sounds talkaround tone sequence whenever Talkaround button is pressed and handset is in range of its gateway. **Default - ON**

Stealth mode always active

Disables all alert tones and LED status light. User can manually enable stealth mode if programmed off.

Default - OFF

Mute speaker on PTT

Disables all speaker audio whenever PTT is pressed. **Default - OFF**

Mute speaker on charge

Disables speaker when handset is in gateway or a charger. **Default - ON**

LED charge indicate

Disables "momentary blink" charge indicate when handset is placed into gateway or a charger and device is charging. **Default - ON**

Auto turn on when charging

Causes handset to automatically turn on whenever it is placed in gateway or a charger. **Default - On**

Minimum volume is off

Allows user to turn the speaker audio off instead of level 1. **Default - OFF**

Mandown Biometric Monitor (when fitted)

Enables/disables function via programmer for Plus handsets fitted with XMD option. **Default - OFF**

Internal Mic Only Operation

Maintains operation via internal microphone when accessory attached to Hirose port. required for earpiece (WPEH-X10/WPTEP-X10) use via Hirose headset port. **Default - OFF**

Out of range turn off time

Sets time in hours that a handset that is not actively connected to a gateway will remain powered on before turning itself off. **Default - 8 hours**

Low battery beep voltage

Sets the remaining battery voltage that will cause the low battery alert tones to be generated. (for longer shift life you may set voltage lower but you may get less warning before device automatically shuts off.

Default - 3.5V

Low battery beep interval timer

Sets the interval that the low battery alert tones are sounded in the handset.

Default - 5 minutes

ELITE PLUS ONLY OPTIONS

Handsfree Function (shows "disabled" if feature not enabled)

Enables user selectable handsfree function in Elite Plus handsets

Default - ON

Toggle PTT/TA Button Assignment

Configures handset so that pressing the top grey Control button toggles the side PTT button assignment between host radio PTT and Talkaround or 2nd Radio device PTT /PA Mode when used with XSJB or similar.

Default - OFF

Command Relay Mode / Automatic Relay Mode

Selects the Relay Mode type in Elite Plus handsets.

Default - Command Relay

Programming Feature: Audio Levels - Handset

Note: Use the **Gateway Audio Level Adjustment** - XGALA software tool can be downloaded at www.x10dr.com for setting audio in and out of gateway to host mobile radio.

The following handset adjustments are designed to cater for different audio accessories and/or user applications requiring alternate audio sensitivities to suit different operating conditions.

Internal Mic Gain

Sets the internal microphone's transmit audio level sensitivity.

Default - 3

Internal Mic High Gain Boost

Sets the internal microphone's sensitivity when "Live Mic" is active.

Default - 6

External Mic Gain

Sets the external microphone's transmit audio level sensitivity.

Default - 9

External Mic High Gain Boost

Sets the external microphone's sensitivity when the X10DR's "Live Mic" is active or when user manually selects high gain by powering up microphone with blue volume up button pressed.

Default - 6

Remote PTT Gain Boost

Increases sensitivity of internal microphone when remote/handlebar PTT is pressed.

Default - 9

Fixed Alert Tone Volume

Limits all user monitored alert tones to level set below rather than being controlled by handset volume controls.

Default - OFF

Alert Tone Volume

Sets the value of the "Fixed Alert Tone" when enabled that a user will hear from their handset.

Default - 5

Programming Feature: Emergency - Handset

- Applicable when handset is configured for press & hold emergency

Audio link active time

Sets the duration the transmit audio is active after Emergency button is released. Feature is intended for those mobiles that activate their own internal "Live Mic" function whenever emergency is triggered. This allows the handset's Tx audio to be broadcast over the radio's transmit channel, (assuming mobile sources "Live Mic" from its external mic input). **Default - 0**

- Applicable when handset is configured for short/long press emergency

Transmit Time

Sets the time duration that X10DR "Live Mic" handset Tx audio is active when Advanced Emergency activated.

Default - 0

Receive Time

Sets the time duration that X10DR "Live Mic" handset Rx audio is active when Advanced Emergency activated.

Default - 0

Emergency repeat cycles

Sets the number of "Live Mic", Tx and Rx cycles when Advanced Emergency is triggered.

Default - 1

Transmit audible emergency tone

Causes an audible emergency warble tone to be transmitted over the host mobile radio channel when emergency is activated.

Default - Off

XIVG Gateway

Programming Feature: Audio Levels - Gateway

Receiver Input Gain From Radio

Sets the receive input sensitivity. **Default - 0**

Transmit Output Gain To Radio

Sets the audio output level to radio when local/remote /handlebar PTT is pressed or when "Live Mic" is active. **Default - 0**

Talk Around Output Gain to other X10DRs

Sets the "intercom" microphone audio level. **Default - 0**

Find Me™ Function

Enables Find Me function in gateway. User double presses gateway **Function** button to trigger Find Me alert tones or triggers Remote FindMe.

Default - OFF

Radio Receive VOX/COR

Enables VOX derived COR. **Default - ON**

VOX Trigger Level

Sets the gateway's audio detect sensitivity for VOX derived COR. **Default - 70**

Public Address Mode

Sets the gateway so only handset Talkaround audio is sent to the gateway 3.5mm jack. When unchecked both Radio PTT and Talkaround audio is available for in-car monitor use. **Default - OFF**

Monitor Emergency Input Alert Tone

Causes Emergency warble alert tone to sound in all cross connected X10DR handsets whenever emergency input is triggered. (i.e. triggered from another gateway or externally supplied ground input).

Default - OFF

For ease of setting we recommend you use the XGALA Gateway Audio Level Adjustment software tool that can be downloaded from www.x10dr.com Support page

Trunking Support

Enables speaker audio upon PTT for 500mS, so host trunked mobile's Channel Grant /Talk Permit tones can be clearly distinguished by user. Handset Mic audio is also muted for 500mS to prevent those tones being rebroadcast over talkgroup. For optimum performance set VOX trigger level for 90-100 for fastest response.

Default - OFF

ELITE Series Only Options

Multi Operational Mics

Allows two or three Elite Series Mics to be simultaneously operational through the one Elite gateway unit.

Default - ON

Remote Find Me™

Enables Find Me function in gateway via grounding the white wire connected to pin 8 (Replaces Remote PTT function)

Default - OFF

Programming Feature: Hardware - Gateway

I/O

Defines whether the specific gateway interface pin is assigned as an input or an output.

Active

Sets whether the interface pin needs to be held low or pulled up high to activate assigned functionality.

Function

Assigns desired functionality to Interface pin.
Choose the desired input or output from the dropdown boxes.

Pulse

Defines the length of time an input must be activated before the function is triggered or alternatively how long an output is activated when the assigned function has been triggered. A value of zero means an input triggers instantly.
